

Post-doc position available with Alan Grossfield
University of Rochester Medical Center
Department of Biochemistry and Biophysics

We have an opening for a postdoc to work on new methods to computationally evaluate the thermodynamics of phase separation in lipid membranes. Experience with molecular dynamics simulations is essential. Experience simulating membranes or applying enhanced sampling methods (including the weighted ensemble method) is preferred but not required, as is skill in programming in python and/or C++.

Candidates should either have their PhD or be close to finishing – preference will be given to those available soon. Salary will be consistent with the NIH scale.

If you have questions or wish to apply, please contact me via email at alan.grossfield@urmc.rochester.edu, with the word “POSTDOC:” in the subject line.
